

56th ANNUAL DIAGNOSTIC SLIDE SESSION 2015

CASE 2015-9

American Association of Neuropathologists Annual Meeting - June 13th 2015

Phedias Diamandis, Brendan C. Dickson, Dennis Izukawa, Claire I. Coire

Phedias Diamandis, MD PhD

PGY4, Neuropathology Resident

Department of Laboratory Medicine & Pathobiology

University of Toronto

p.diamandis@mail.utoronto.ca

Clinical Summary

ID: 71F

PMH & Family History:

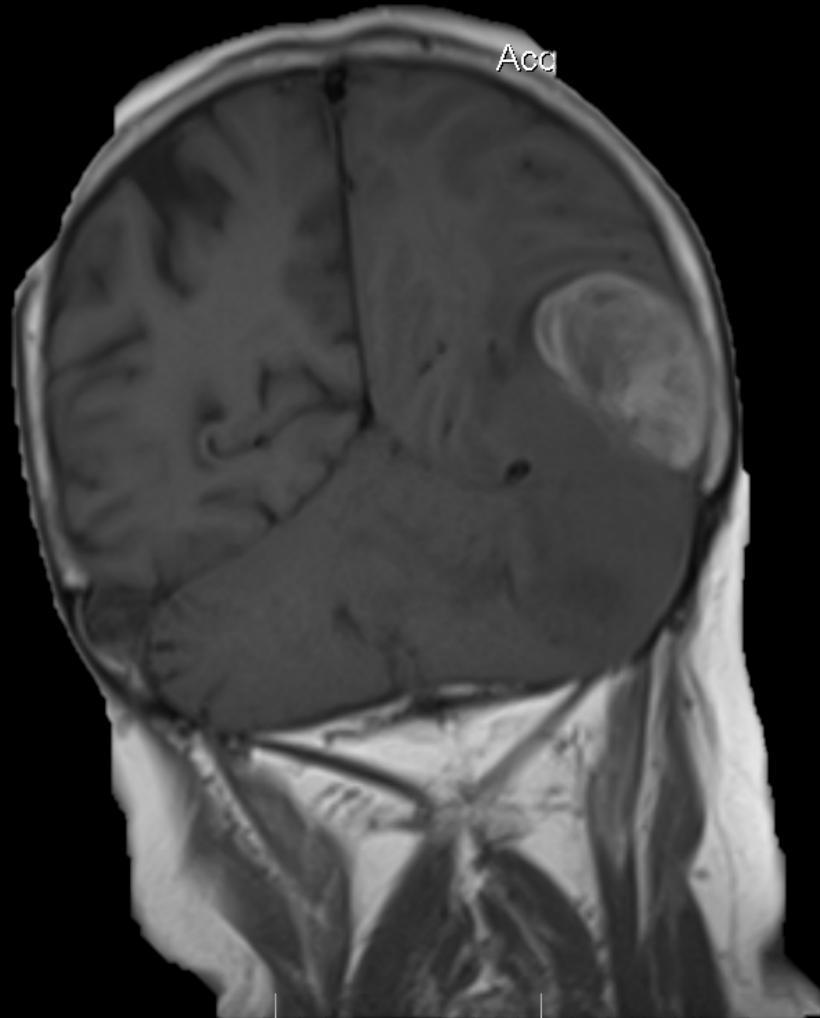

- Non-contributory

HPI:

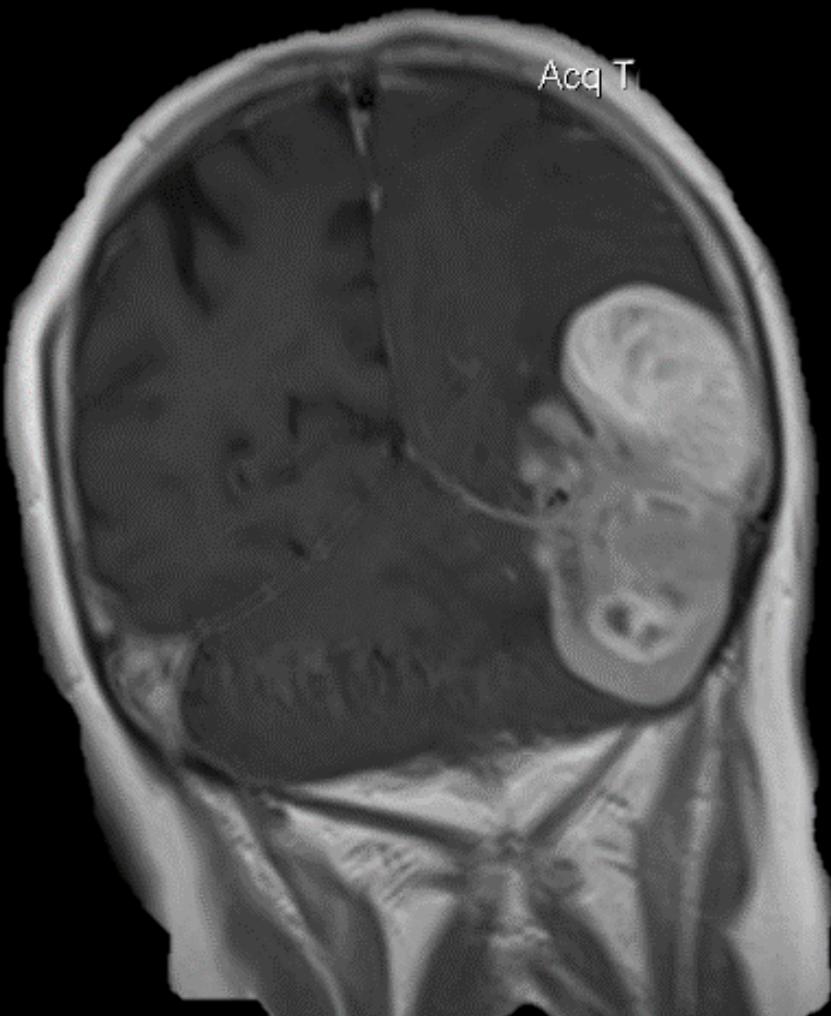

- 6 months of declining speech function
- Sudden deterioration with worsening aphasia, right hemiparesis, unsteady gait

Imaging

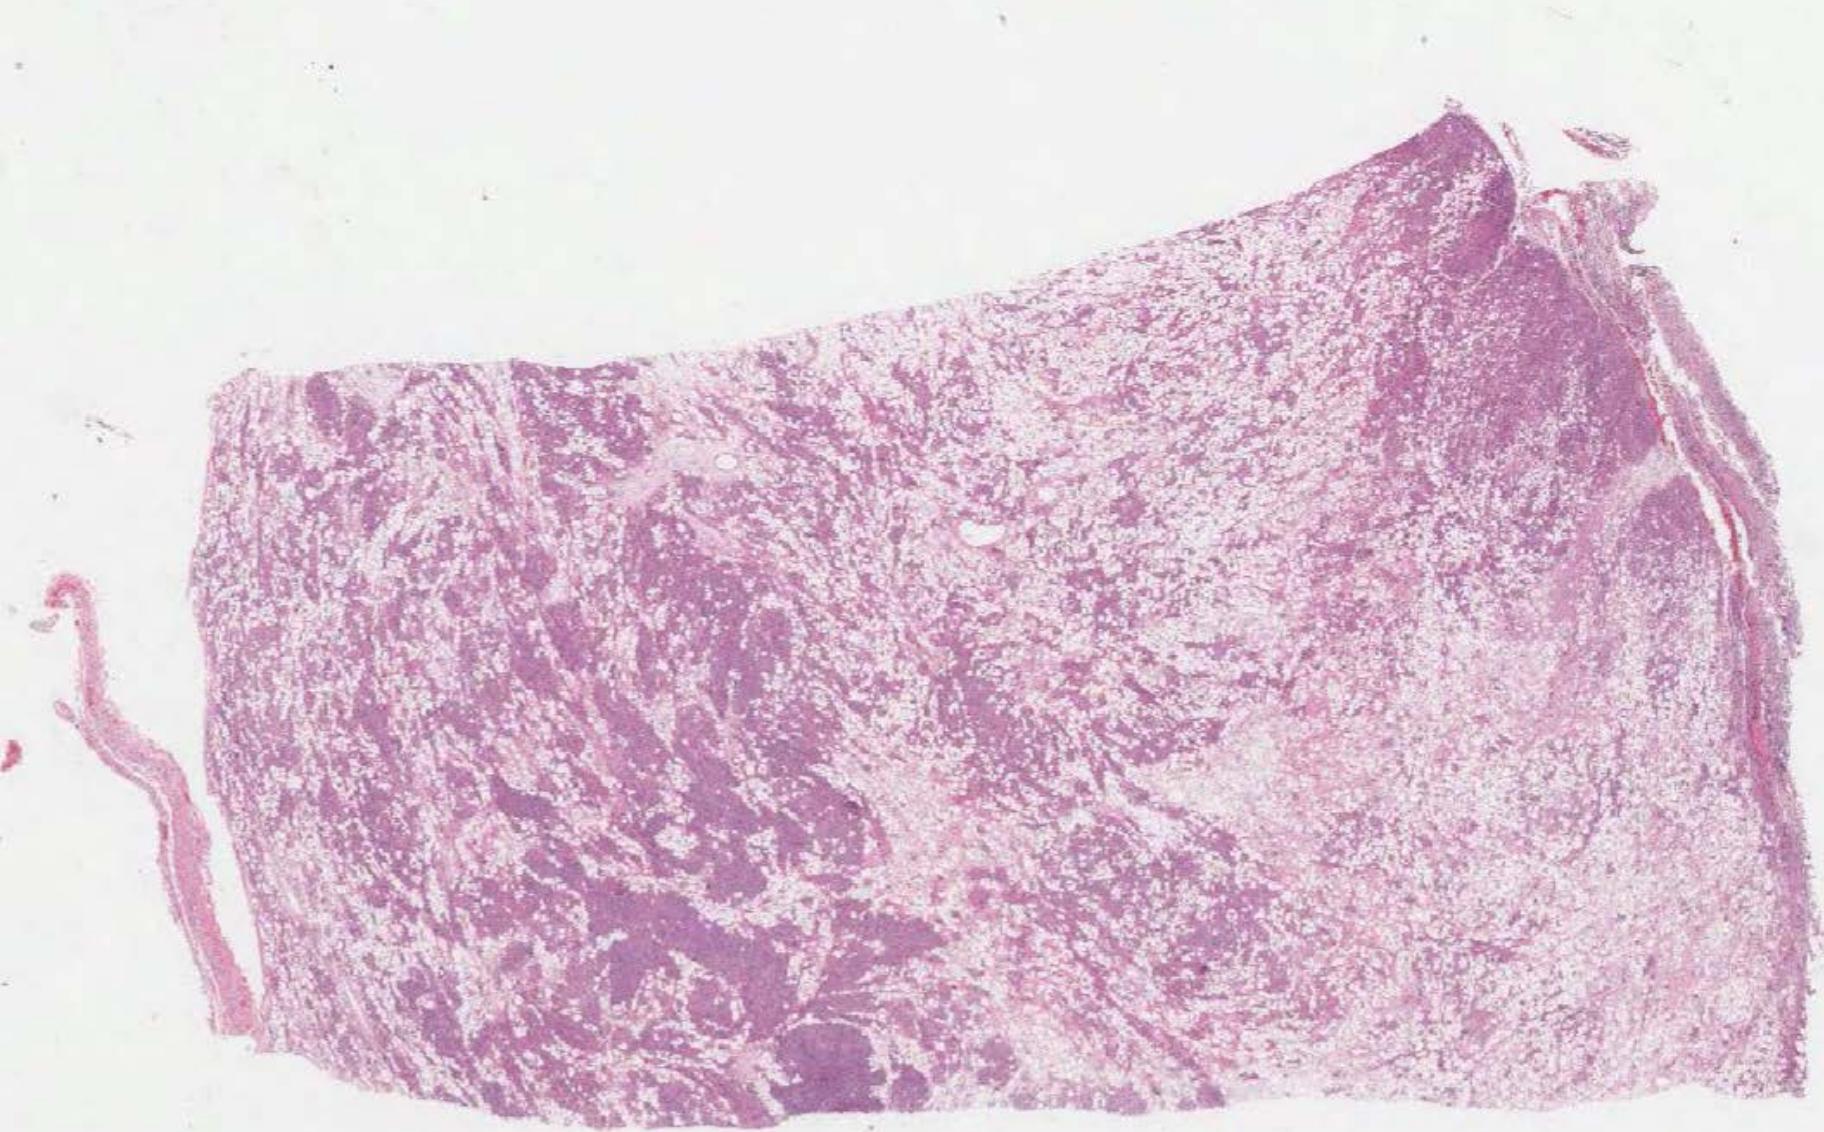

T1 without GAD

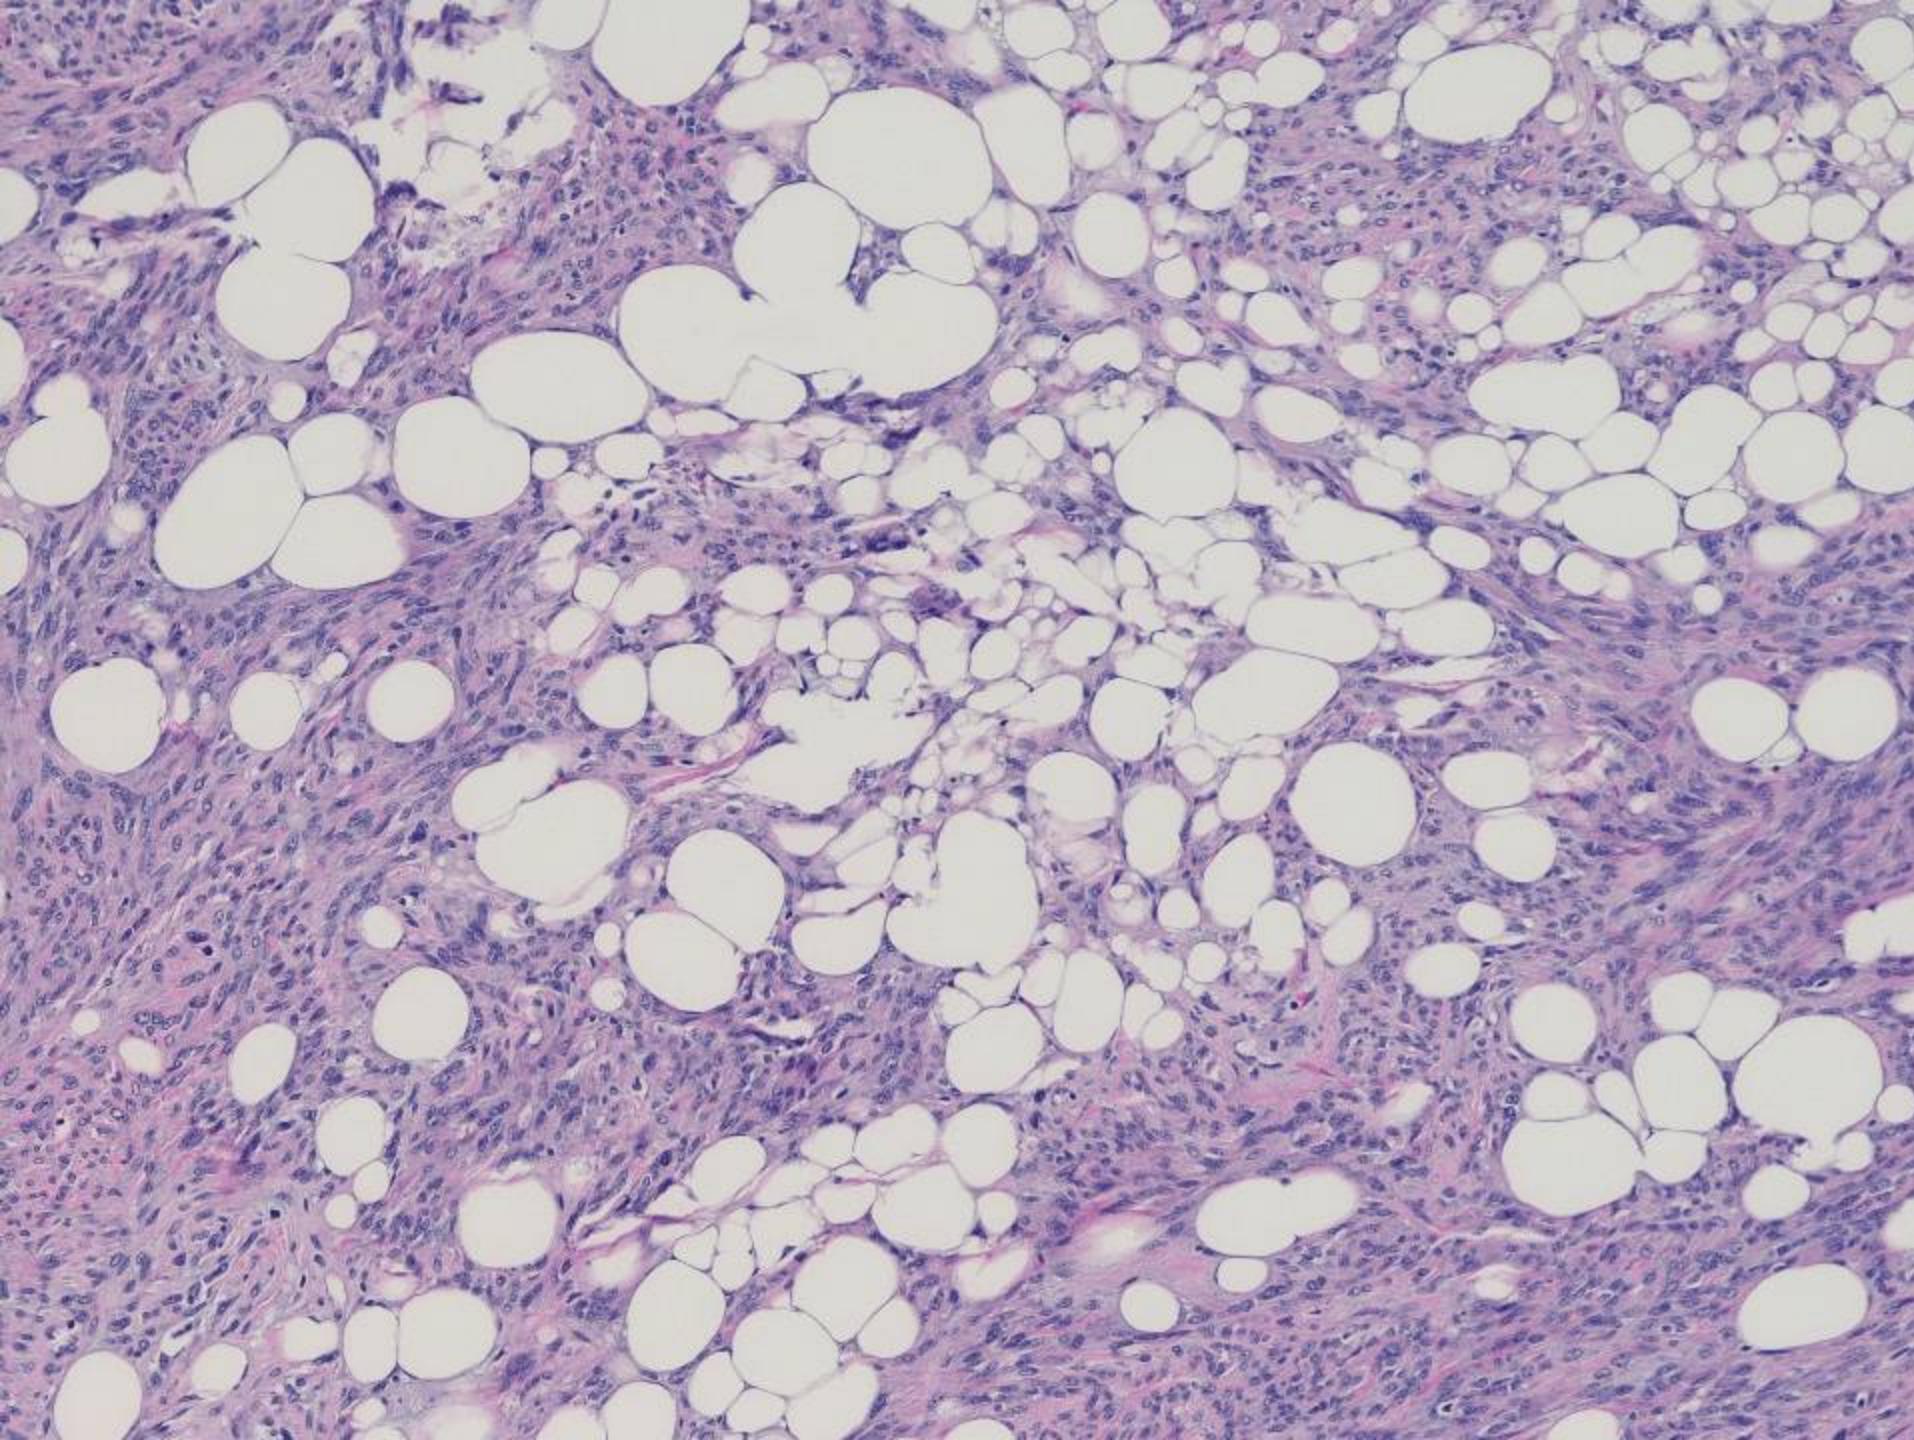

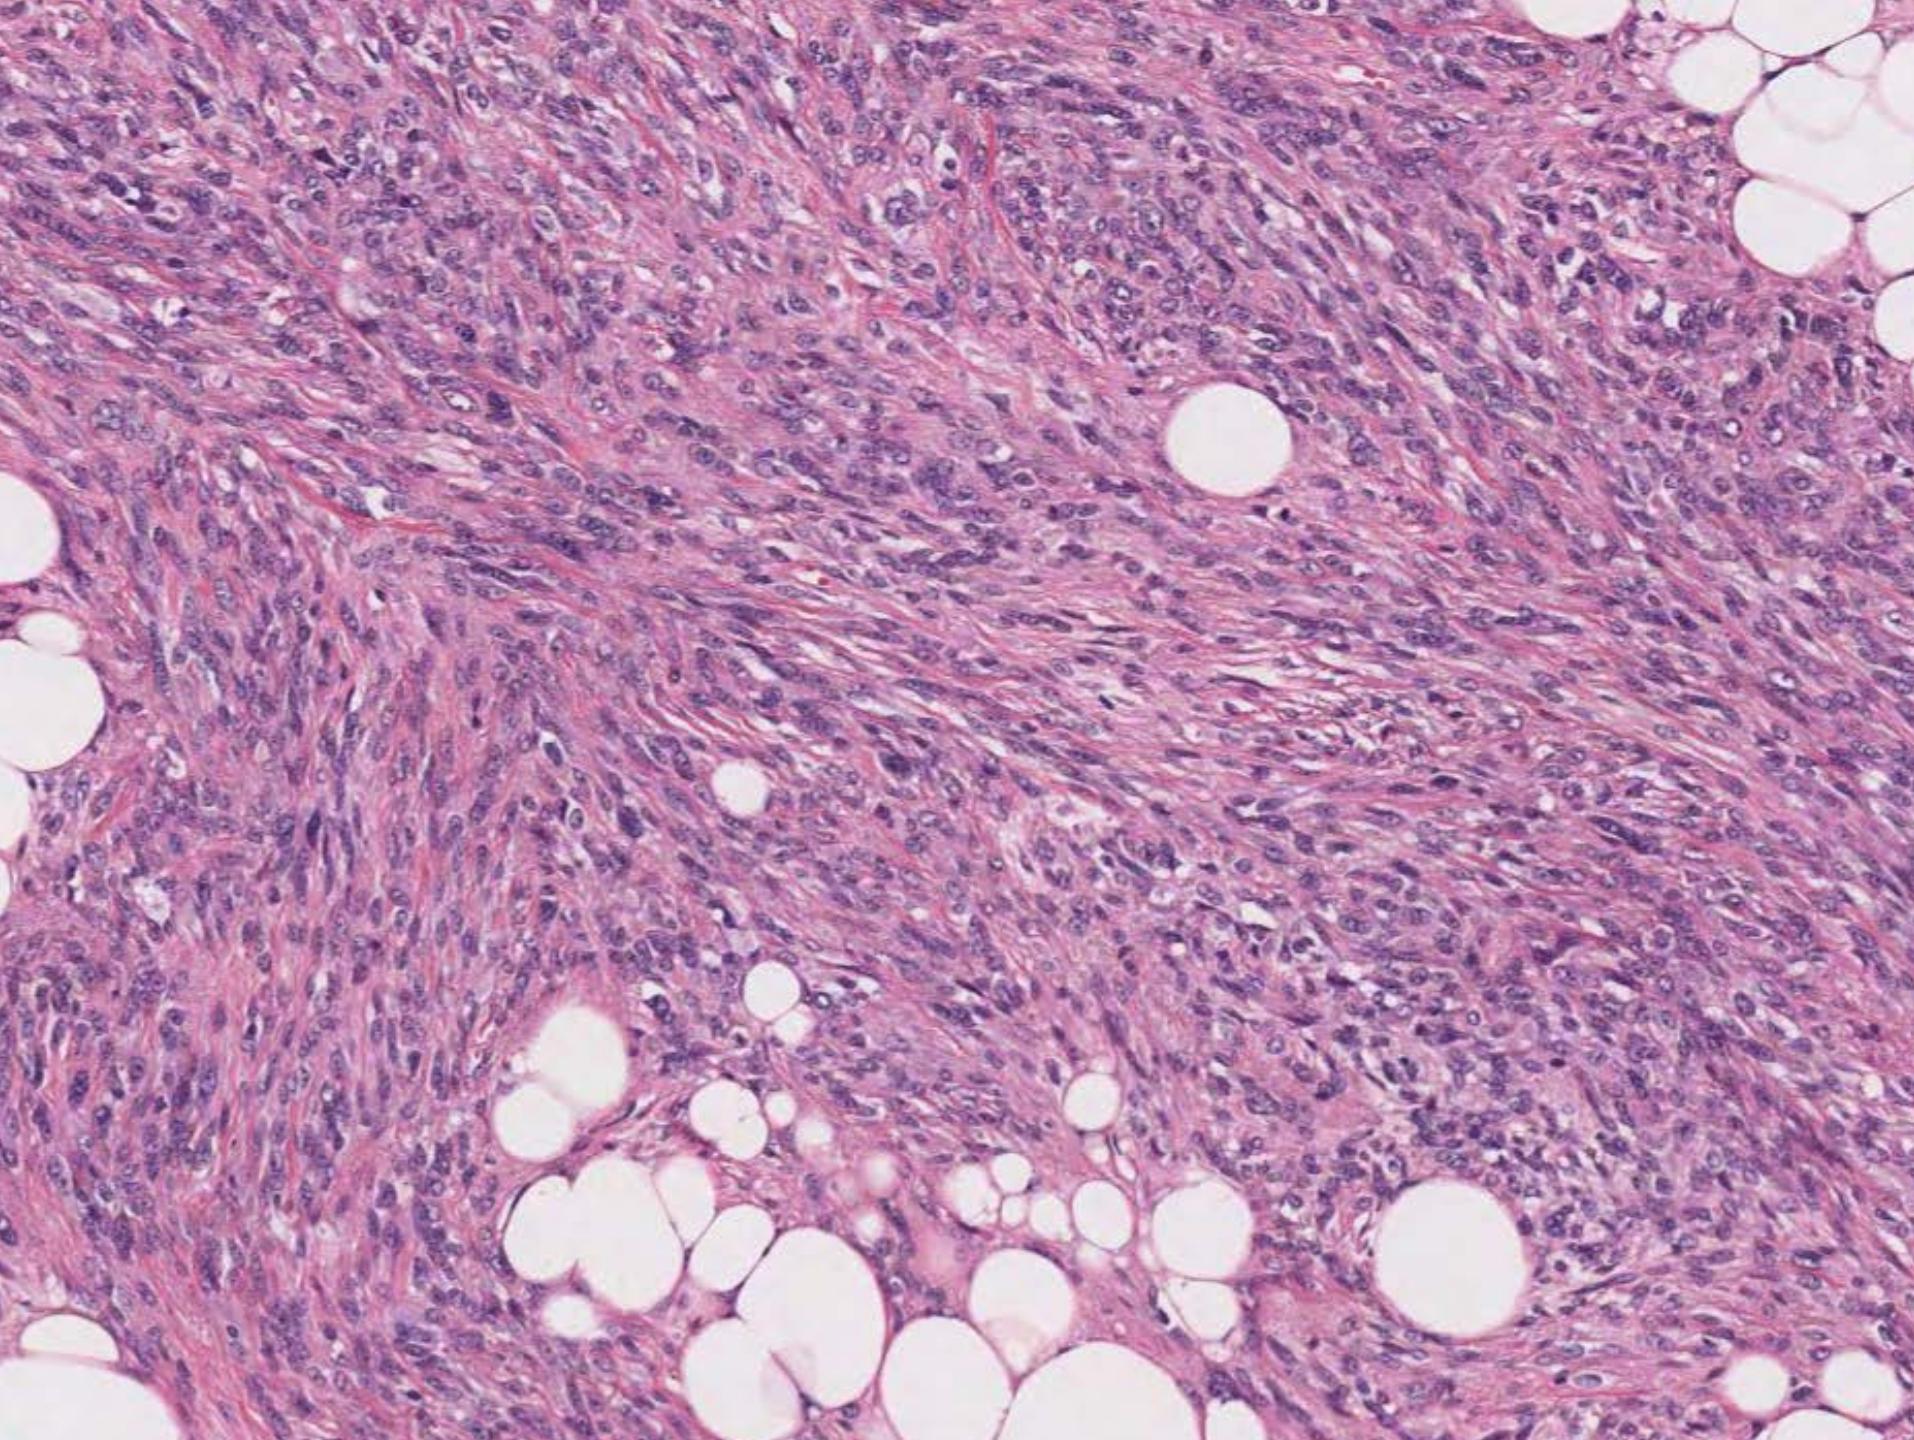

T1 with GAD

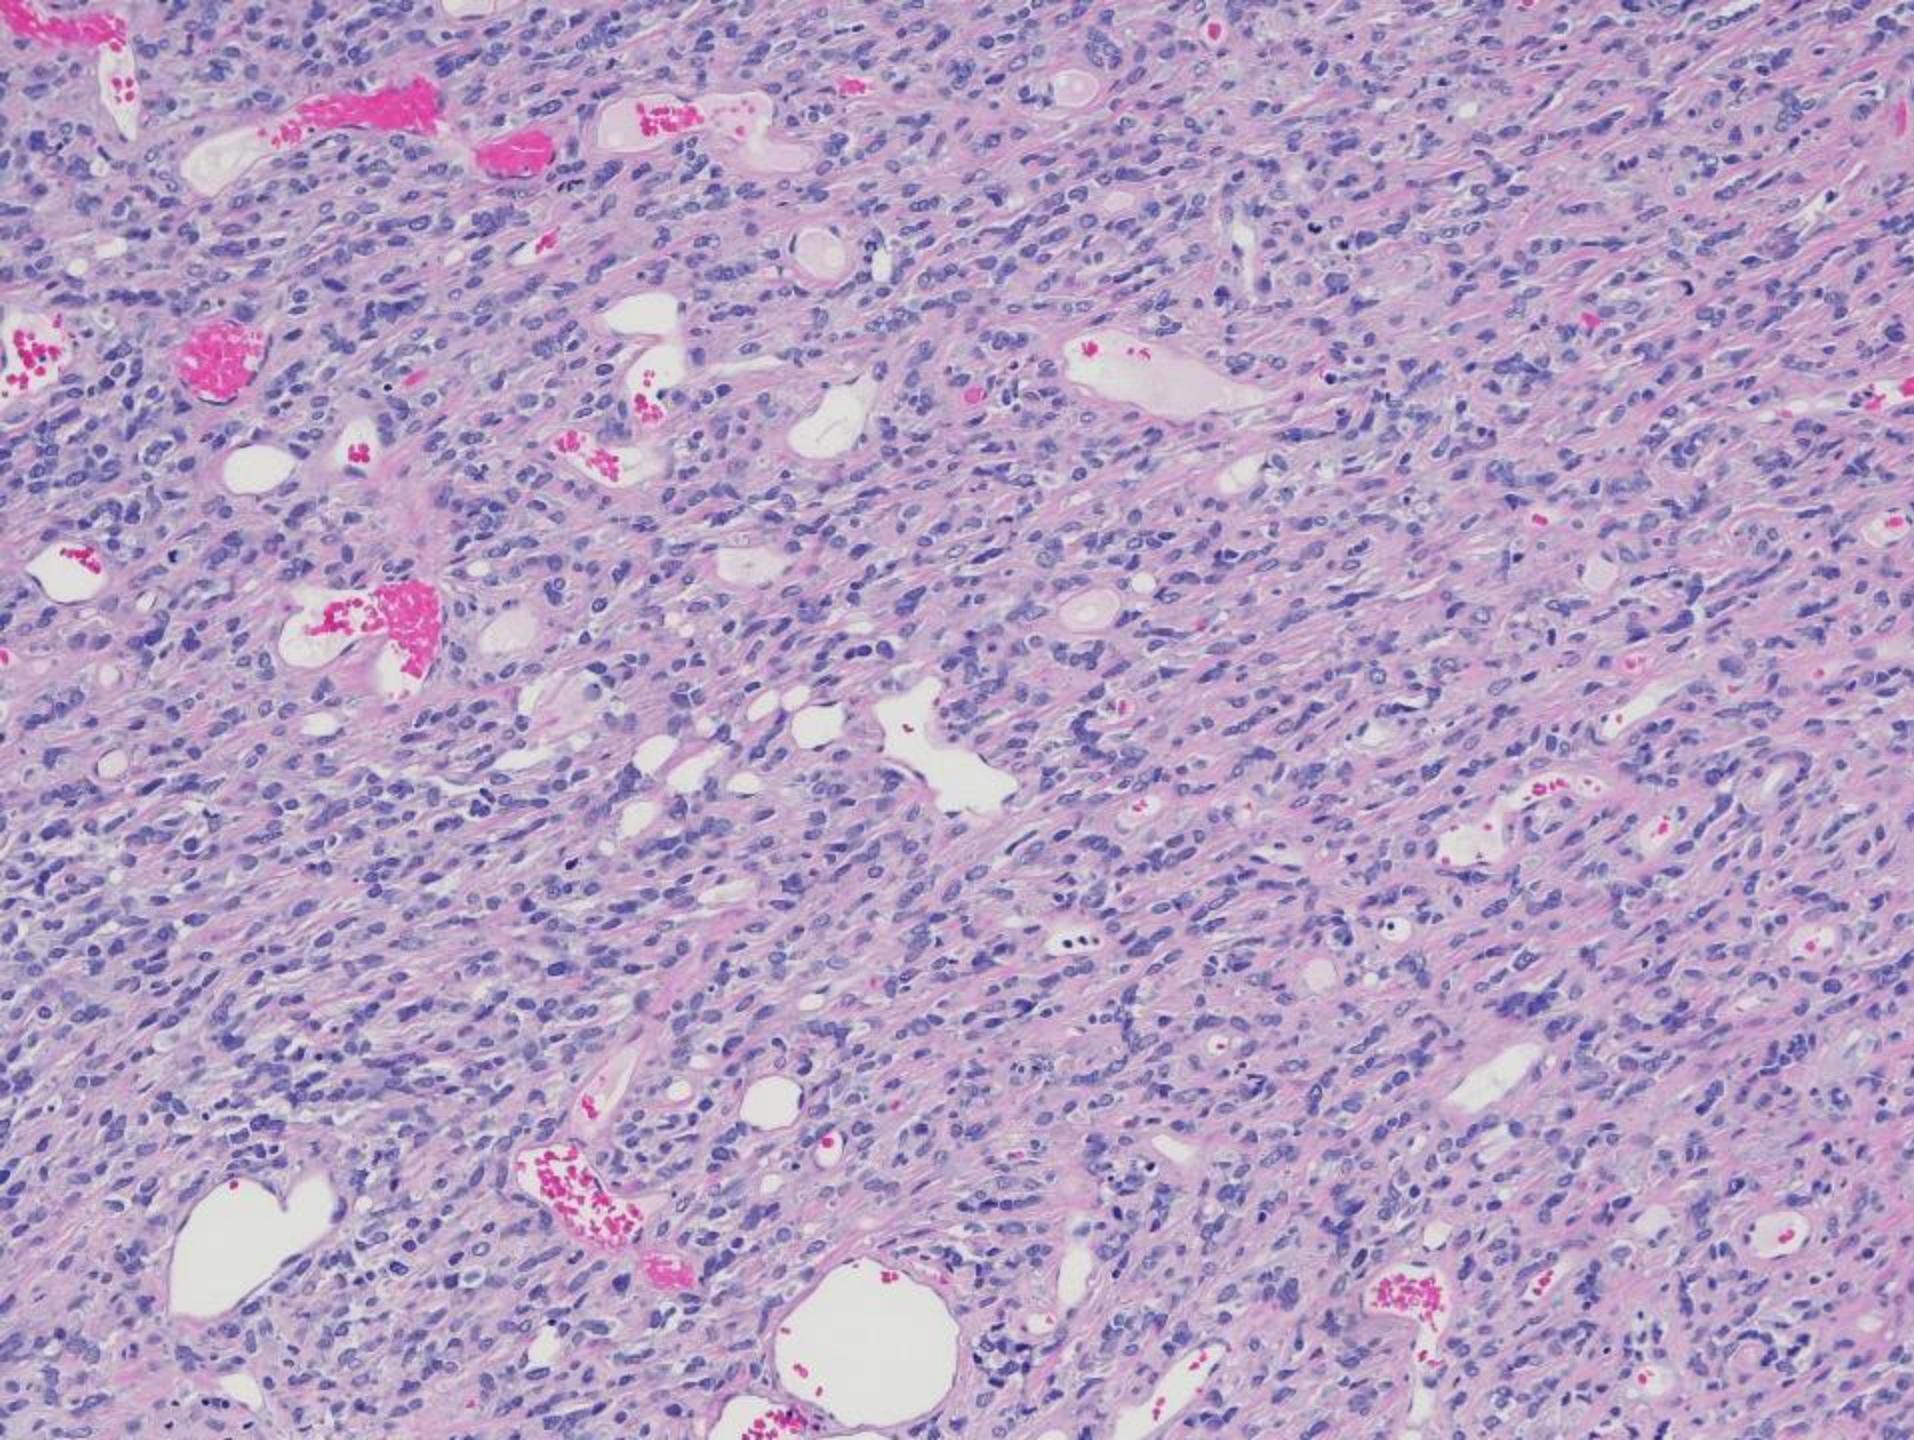

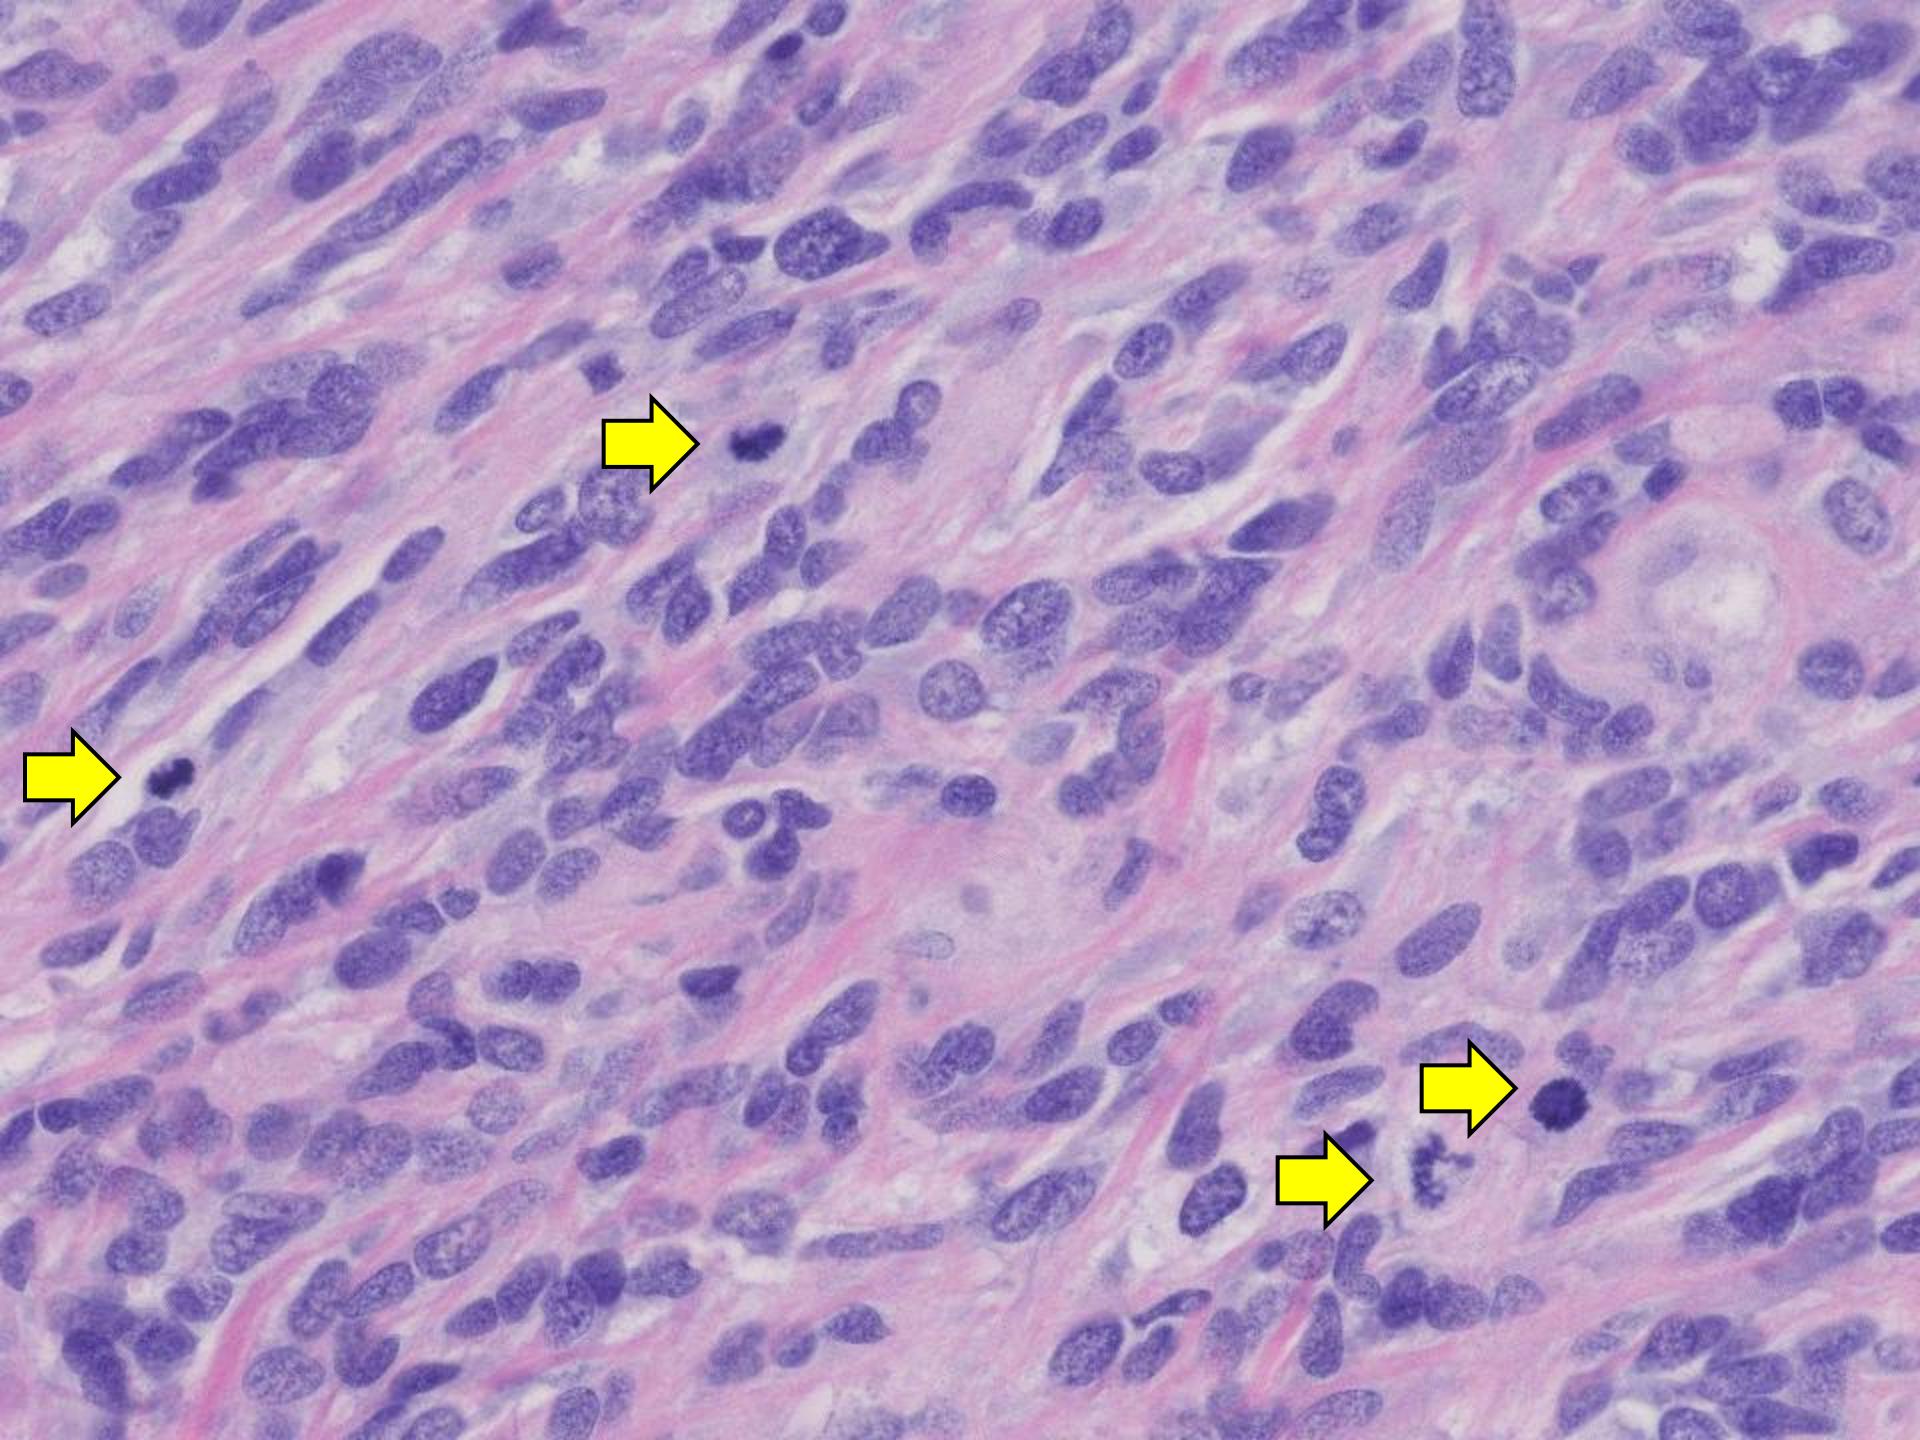

Submitted Slide

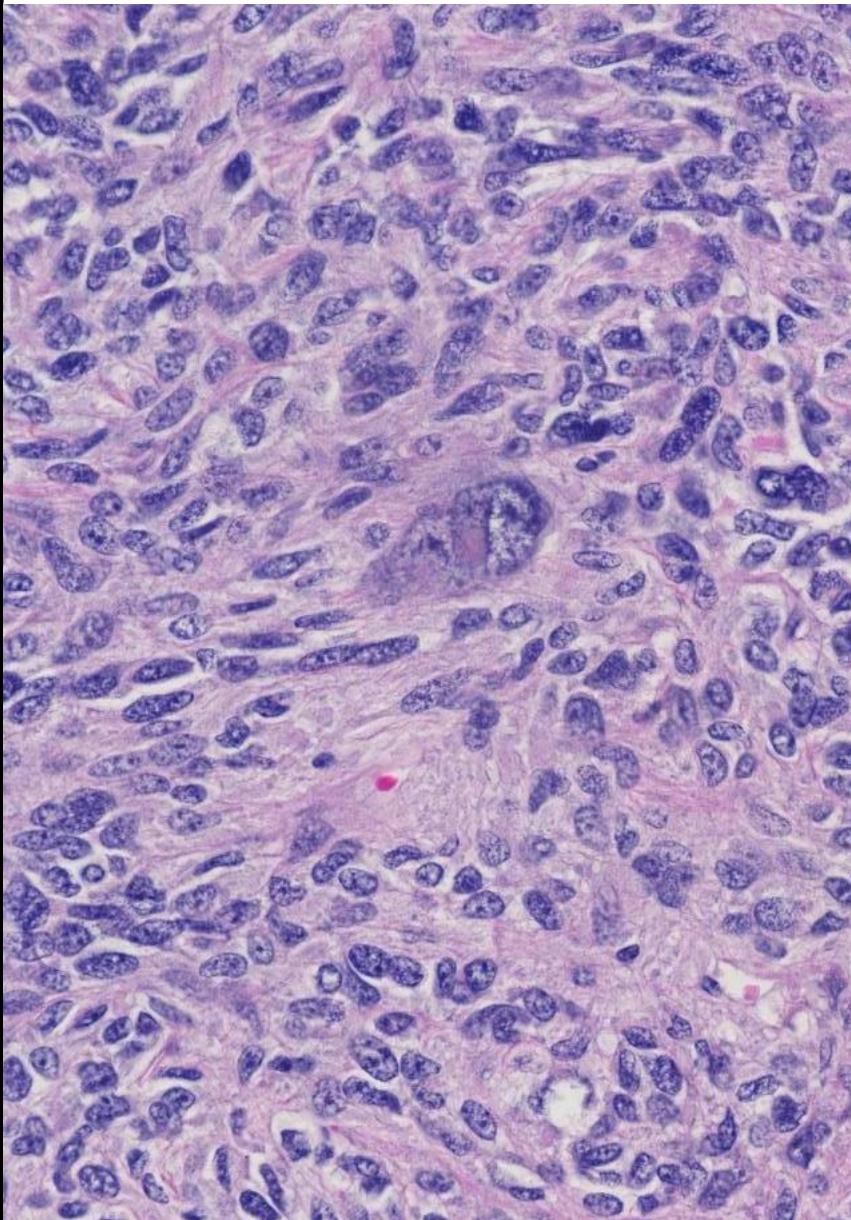

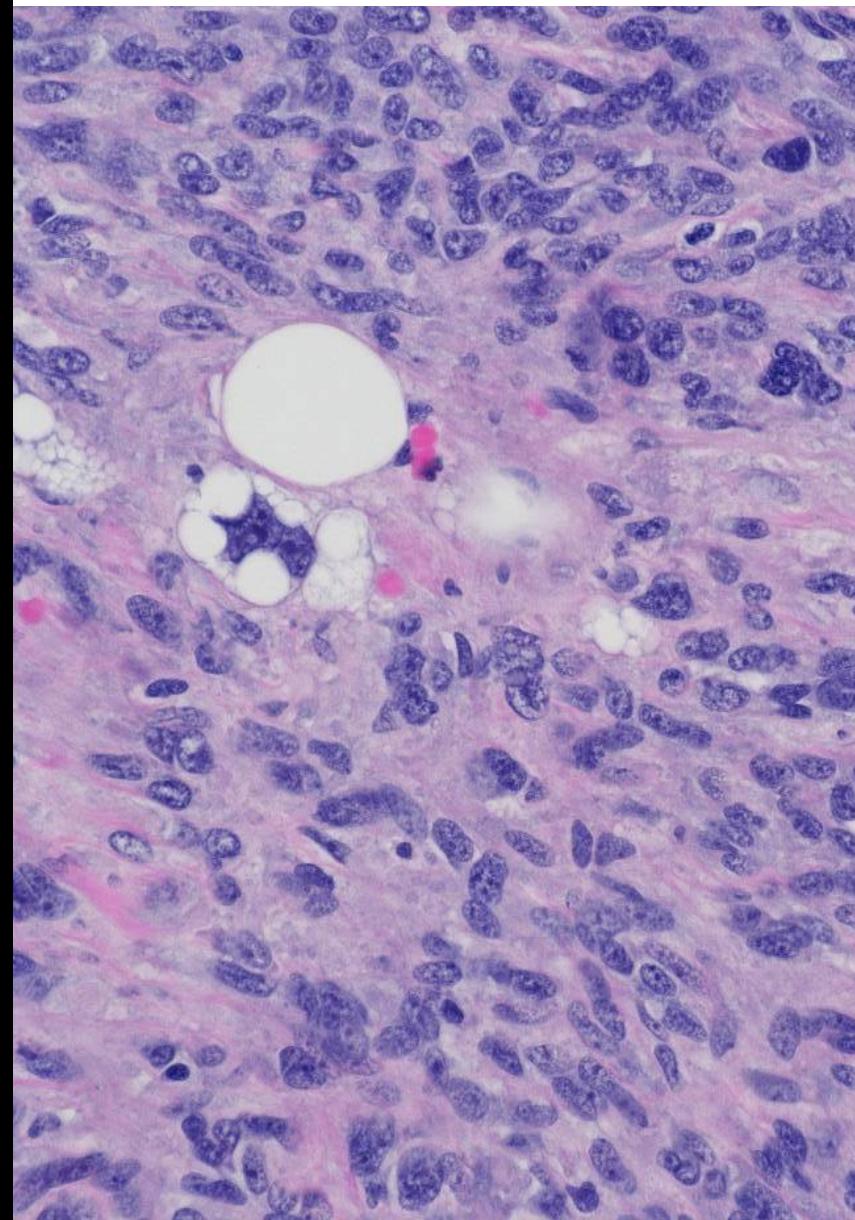

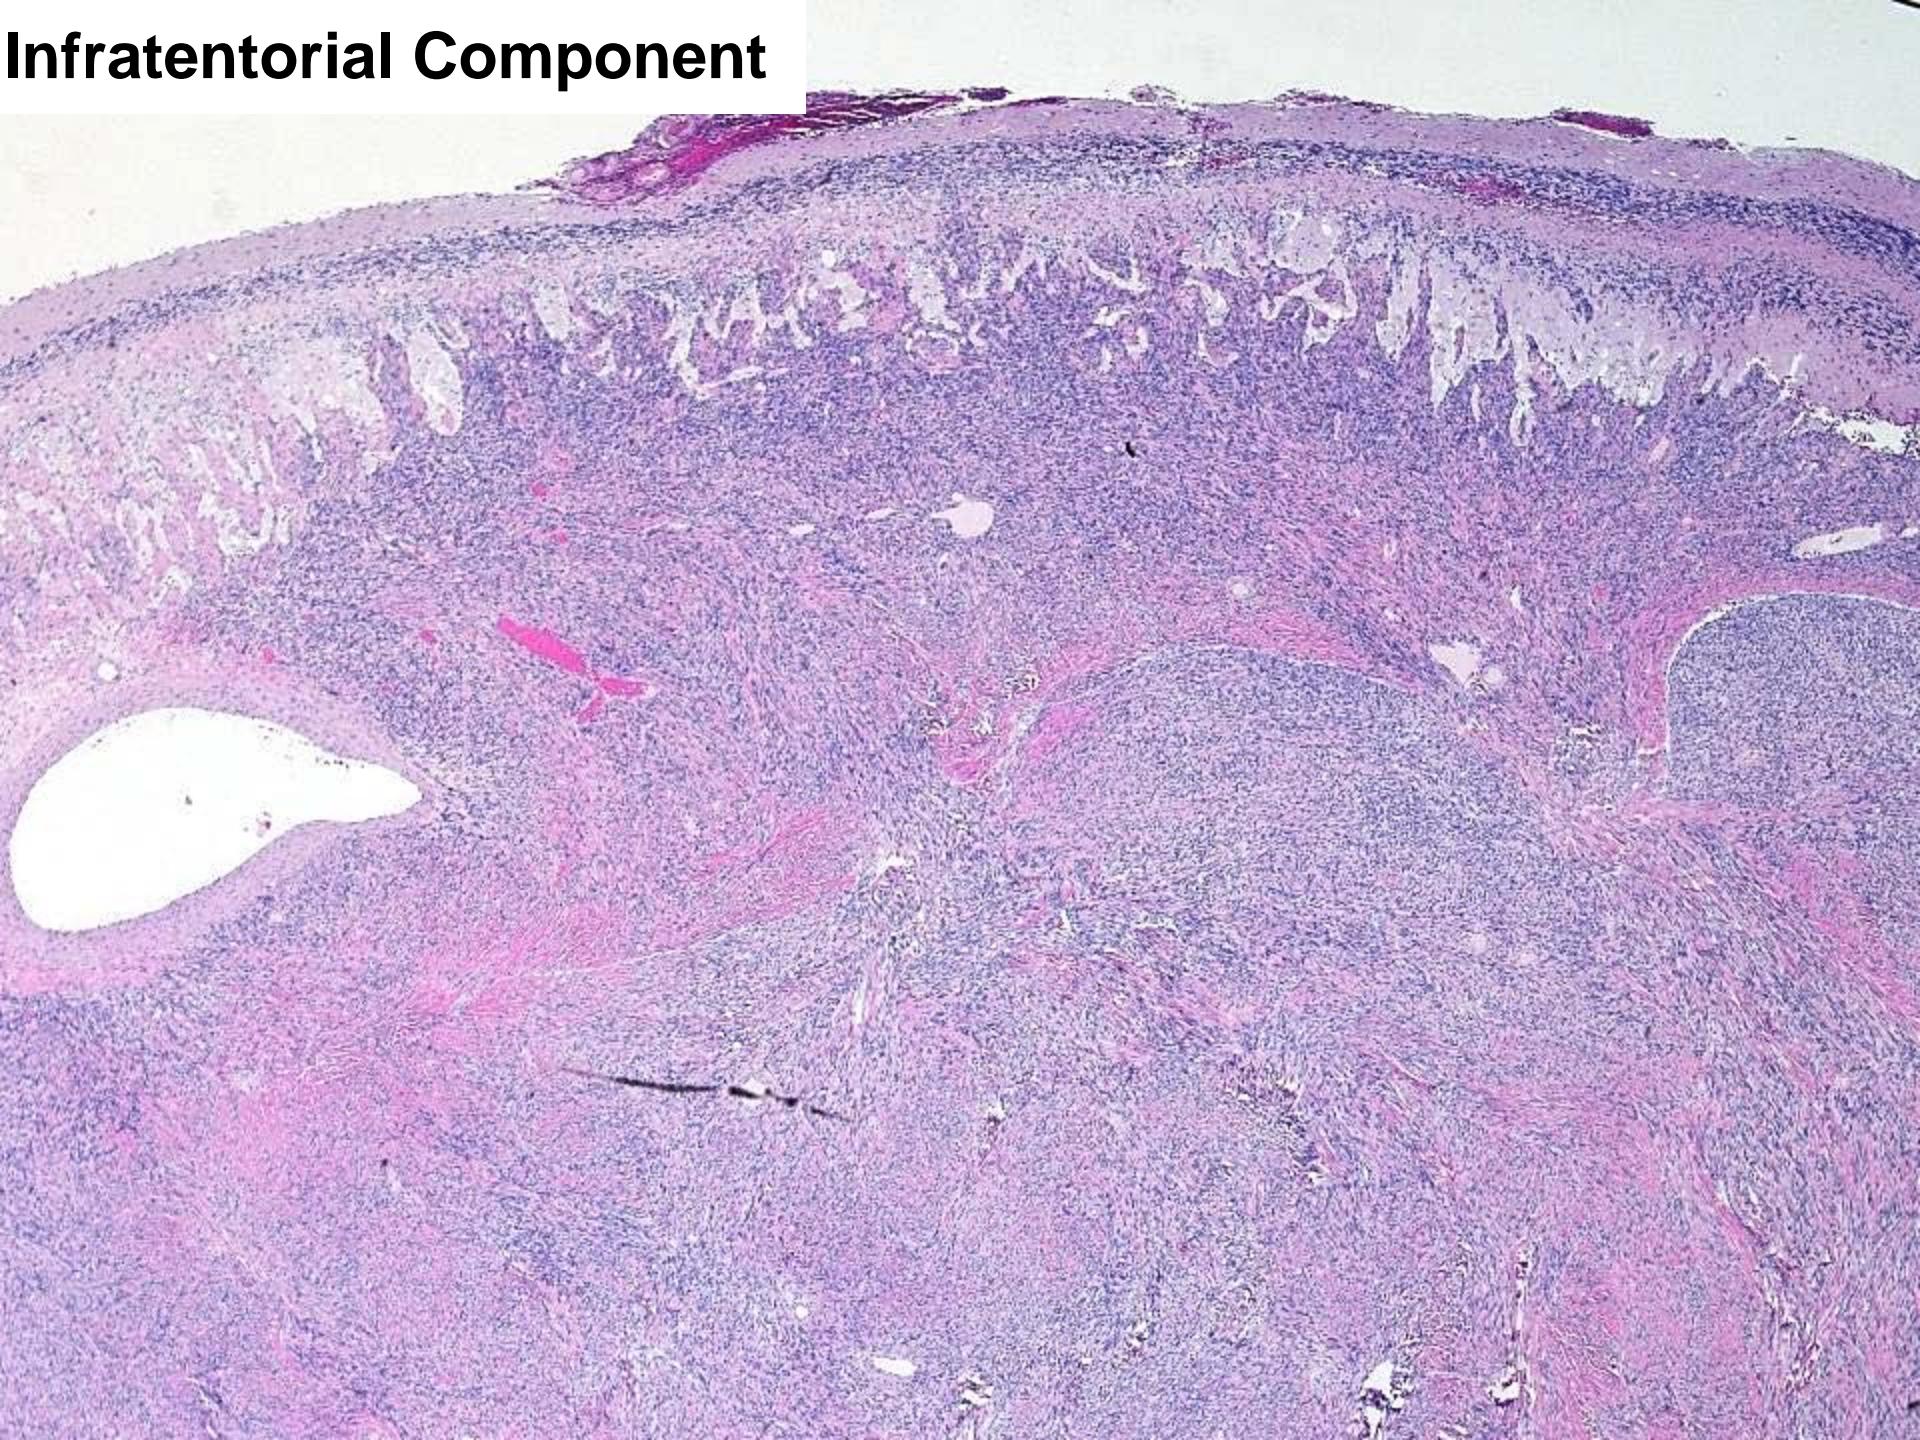

Marked nuclear atypia

Adiposidic nuclear scalloping

Infratentorial Component

Differential Diagnosis?

Additional Studies/Stains?

Differential Diagnosis

1. Malignant Fat-Forming Solitary Fibrous Tumor
2. Liposarcoma, dedifferentiated

Fat Forming SFTs

aka “lipomatous hemangiopericytoma”

- Nielsen et al (1995)
- Rare variant of SFT

Histology:

- Conventional SFT
- Variably prominent mature adipocytic component.

Prognosis:

- Generally follow benign indolent course

Malignant Fat Forming SFTs

Am J Surg Pathol • Volume 35, Number 8, August 2011

ORIGINAL ARTICLE

Malignant Fat-Forming Solitary Fibrous Tumor (so-called “Lipomatous Hemangiopericytoma”): Clinicopathologic Analysis of 14 Cases

Jen-Chieh Lee, MD*† and Christopher D.M. Fletcher, MD, FRCPath†

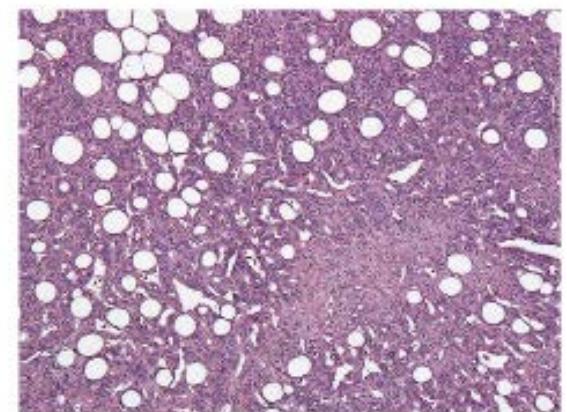

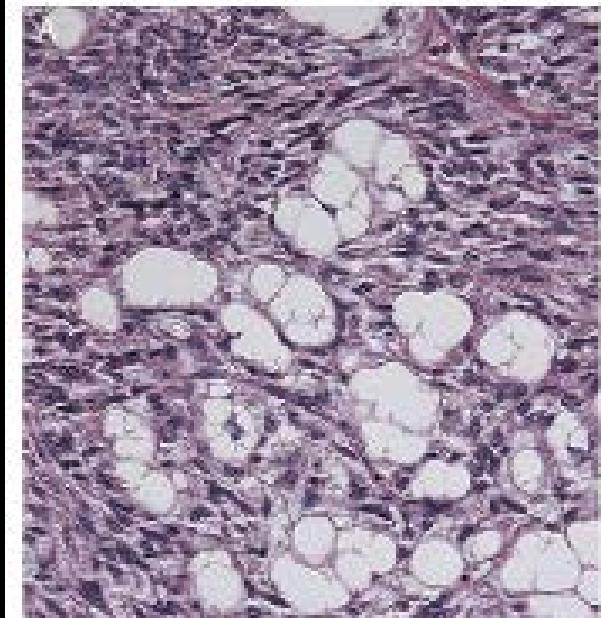

FIGURE 5. Mature adipocytes admixed with the SFT component.

Fat-forming SFTs with malignant histology:

- Very rare
- Histology:
 - Mitoses >4/10 high-power fields (HPF)
 - Hypercellularity (focal to diffuse)
 - Moderate/Severe atypia
 - Necrosis
 - Mature Adipose tissue +/- Lipoblast-like cells

Malignant Fat Forming SFTs

Immunohistochemistry:

- CD34
- CD99

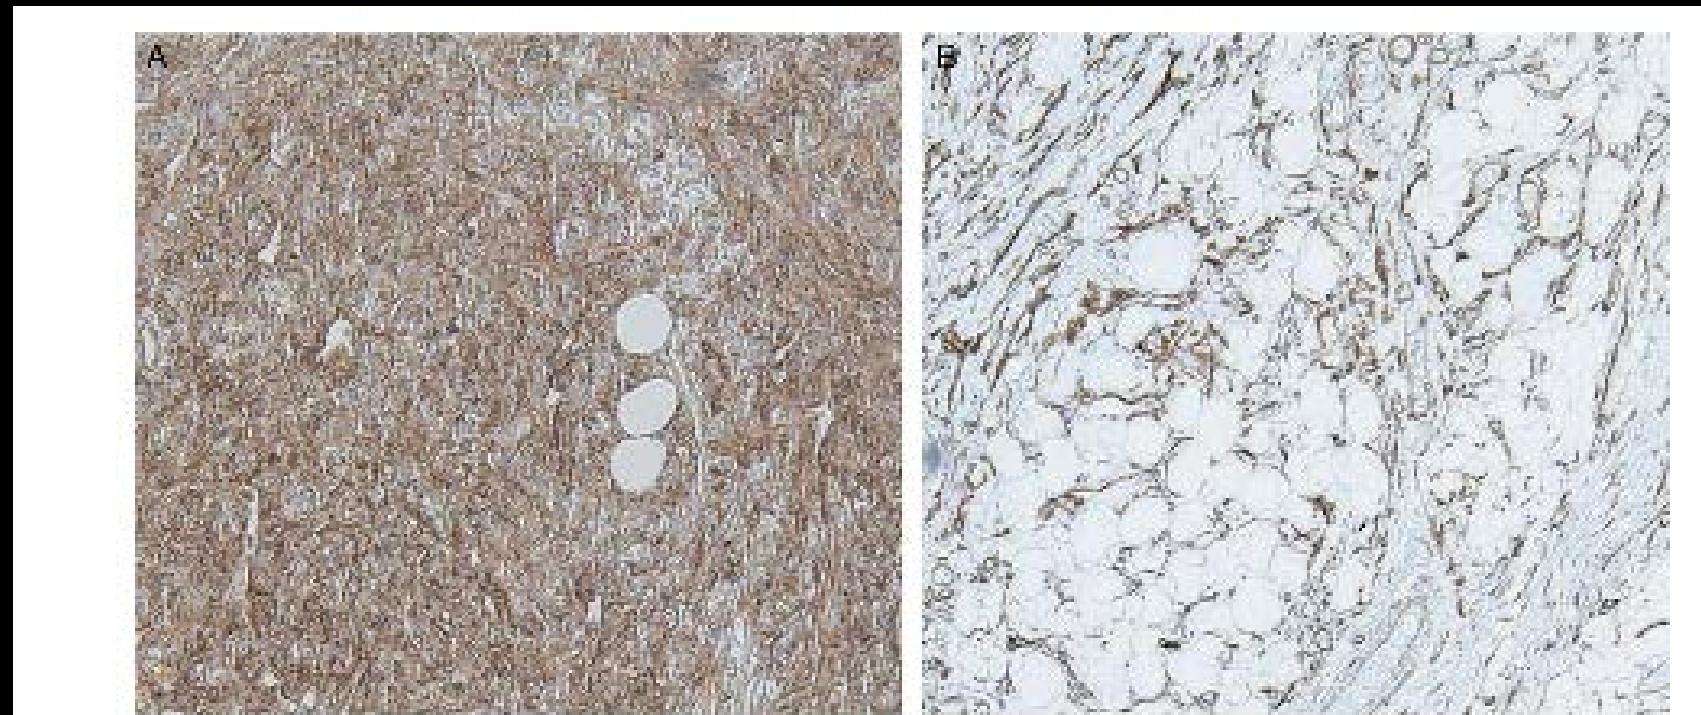

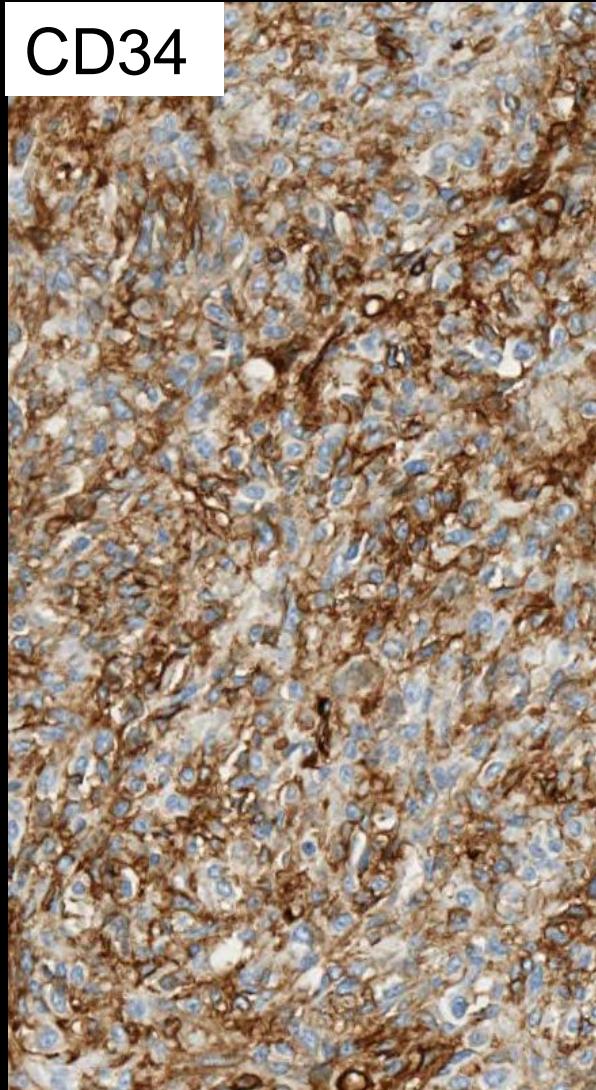

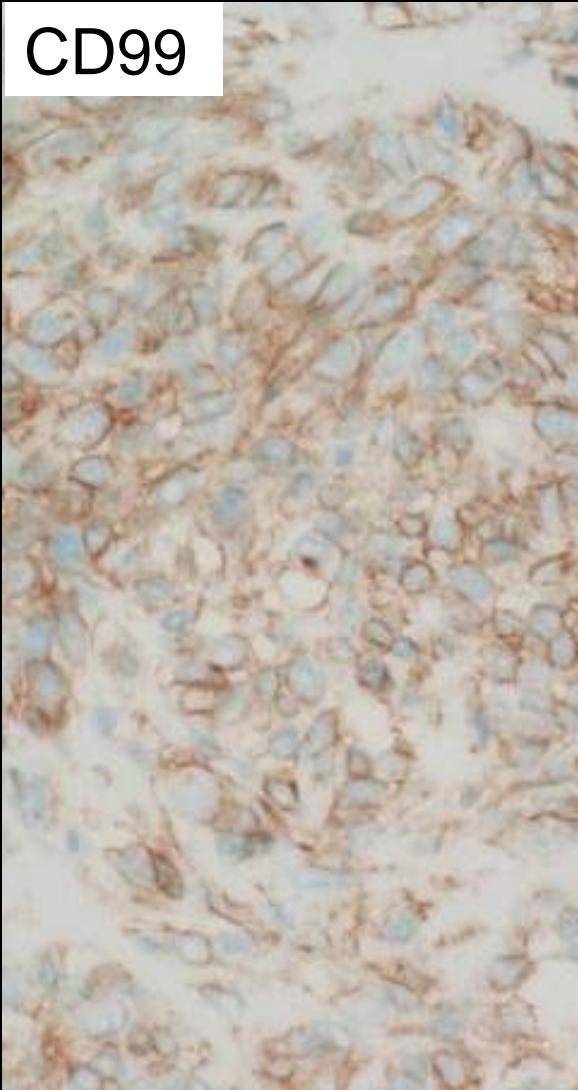

FIGURE 8. The neoplastic spindle cells usually stain for CD34 (A), including those in the ALT-like areas (B).

NAB-STAT6 FUSION

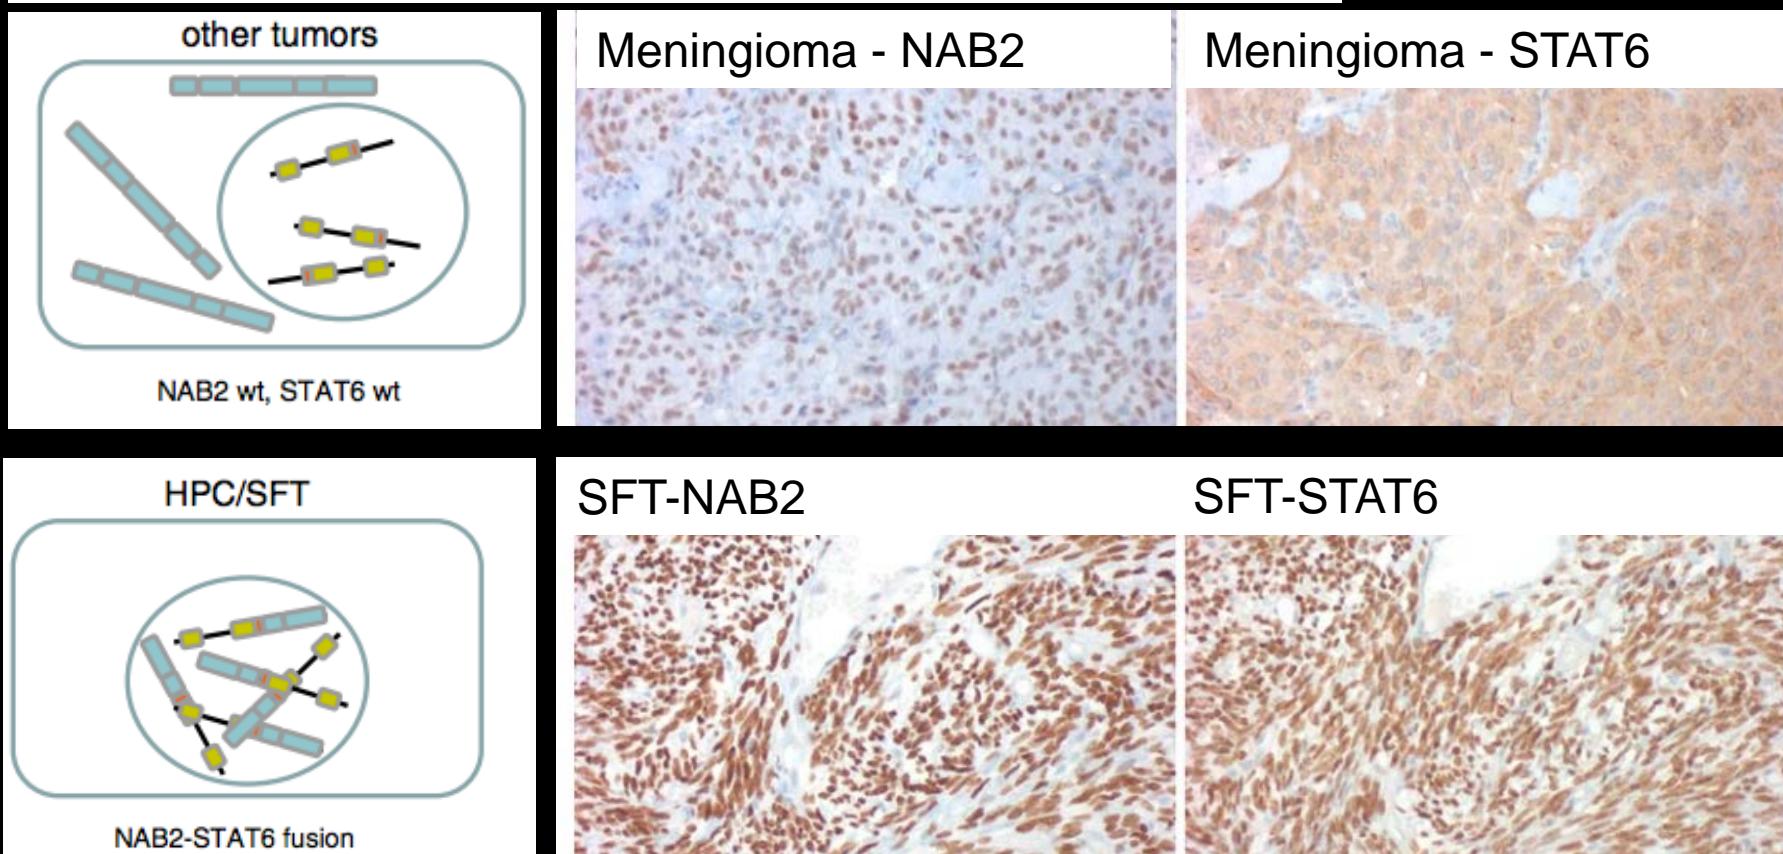

Meningeal hemangiopericytoma and solitary fibrous tumors carry the *NAB2-STAT6* fusion and can be diagnosed by nuclear expression of STAT6 protein
