

CASE 1991-9

Submitted by: James S. Nelson, M.D. and Hernando Mena, M.D., Department of Neuropathology, Armed Forces Institute of Pathology, Washington, D.C. 20306-6000

CLINICAL ABSTRACT:

This previously healthy 23 year old woman developed headaches which became increasingly severe over a period of several months. Neuroimaging studies demonstrated a left frontal lobe mass which was surgically removed.

MATERIAL SUBMITTED: One H & E section of left frontal lobe mass.

POINT FOR DISCUSSION: Diagnosis
